

**Executive Summary**

This technical bulletin describes the proper method of connecting peripherals to the micro-USB ports on the edges of Elo products.

**Procedure**

1. Remove the plastic covers from the peripheral ports by lifting upward at the thumb slot.

2. Observe the micro-USB port to ensure it is straight and not bent or recessed.

3. Carefully align the male micro-USB from the peripheral with the female micro-USB port on the edge of the monitor and gently push the peripheral into place.

4. Be certain not to misalign the connection or it may cause the internal micro-USB connector to become bent or recessed making it unusable.

5. After peripheral is fully seated, use the two provided screws to secure it in place.
