

This procedure requires the use of an Elo multi-touch driver version 6.x.x

**This procedure explains how to install the Elo multi-touch driver to use touch as a mouse instead of a Tablet device.**

1. Remove any installed Elo drivers.
2. Download the Elo 6.x multi-touch driver.
3. Double-click the 6.x multi-touch driver to start the installation
4. Click Unzip
5. Click OK when unzip is finished, then abort the installation (say No to the license agreement)
6. On the C: drive, navigate to:  
Users/(your user account)/**AppData**/Local/Temp/Sw602xxx\_EloMultiTouch\_6.x.x/common  
(NOTE: that's the **AppData** folder, not the Application Data folder)
7. Then open the EloOptions.ini file
8. Below the comments section, under [Setup Options], change ForceMouse=0 to ForceMouse=1
9. Click File in menu, then Save
10. Close the EloOptions.ini file
11. Navigate to Users/(your user account)/**AppData**/Local/Temp/Sw602xxx\_EloMultiTouch\_6.x.x  
(one level up from /common)
12. Double-click elosetup to launch the installer. Accept the license agreement to start the installation
