

Executive Summary

This procedure explains how to change or suppress BIOS boot choices during bootup on Elo AIO products. There are two different methods to do this, see below:

Method 1:

In Windows, open an Admin CMD prompt and type in: **bcdedit /timeout 0**

You should no longer have those choices during startup now. The default is 3 seconds.

Method 2:

Go to **Control Panel/System/Advanced system settings/Startup and Recovery Settings** and set the "Time to display list of operating systems" to **0** seconds and **uncheck the check box** and hit **OK**.
